

## Heating Unit series PRO V24

High-performance electrical water heating unit. The tube is composed of stainless steel AISI 316L or from nickel alloy INCOLOY 800 or INCOLOY 825, mounted on a threaded G 1 ½" brass head. The cover is reinforced polyamide for watertight connections with IP65 protection and UV resistance. It is suitable for outdoor use. The unit includes a 3-phase liquid expansion thermostat with a safety cut-out and a neon or led indicative lamp, depending on the version. Power ranges from 3 up to 12 kW – 400 V/3~.

*For the proper operation of the electrical resistance and the tank, cathodic protection is required only with a magnesium anode of a size proportional to the capacity of the tank.*

*Before installation and use, carefully read the relevant instructions.*
